

## Mammals

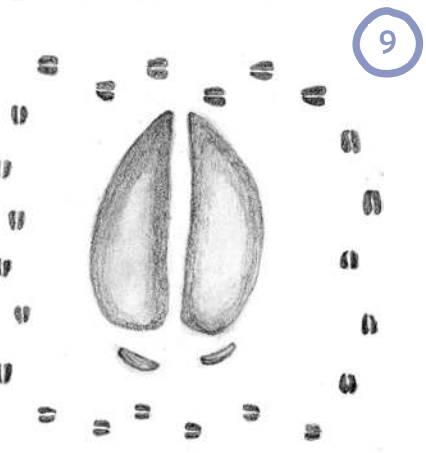

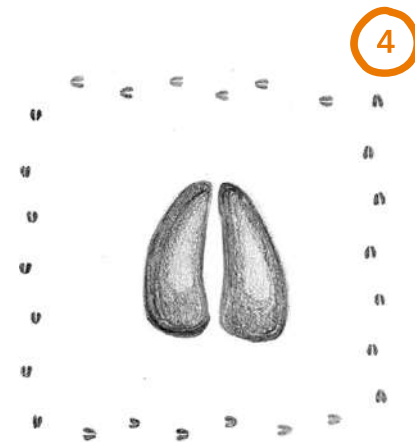

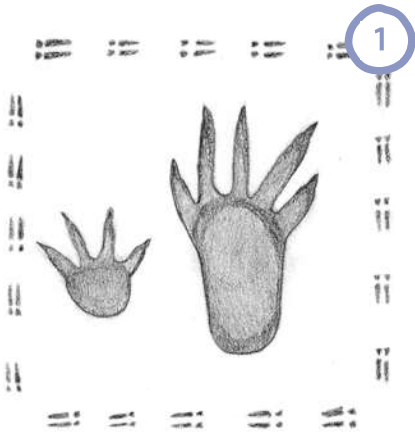

# Mix and Match Tracks

Although Alberta has lots of animals, some are very hard to see. You can learn lots of information by being a nature detective, looking for and examining wildlife tracks (footprints). Match up the track sketches with the animal names (answers on page 19) and then go explore outside and see if you can find any of these tracks!

So, how big are the tracks on the next page anyway?

Some of these tracks are tiny, and some are HUGE! These numbered boxes show each of their actual sizes...

**Match up the tracks...**  
**Then get out and find them!**

Fill in each footprint number below to match them to the animal names:

Bear

Deer

Moose

Beaver

Hare

Mouse

Coyote

Lynx

Squirrel
